Are you an experienced
Software Developer (f/m/d)
looking for your next challenge?

We're looking for you!

WHO WE ARE AND WHAT WE DO

Domi Labs is digital identity start-up that was founded 2019 in Berlin. The core of our product is a SaaS platform for identity management and electronic contracting. It is based on the emerging decentralised digital identity technology called Self-Sovereign Identity. We want to set a standard for exchange of documents containing personal data in business processes. Currently we are working on the core technology and a first business application in the real estate space. We are looking to build a an agile, open-mined, vision-driven team of experts in the following months.

WHAT YOU WILL DO

You will be working closely with the CTO to shape the direction of our technology and take our product from proof-of-concept to product launch. In particular,

• you will design architecture and APIs,

• you will do typical DevOps tasks,

• and occasional work related to the frontend,

• become the lead developer as our team grows,

• actively shape the product,

• onboard and mentor new developers as we extend the engineering team,

• possibly contribute to open source projects.

QUALIFICATIONS WE'RE LOOKING FOR

You are a mid/senior level developer and software generalist who is genuinely interested in programming – you know a number of languages other than JavaScript, are interested in understanding how stuff works, understand algorithms, can reason about performance and safety.

You know at least three languages from the following list Typescript, Java, Python, Clojure, Rust and C# and you are prepared to learn others (when needed).

〜 A strong plus: You are interested in functional programming, ideally you know at least one functional language like Clojure, any other LISP family language

You are not intimidated by DevOps tasks and you are familiar with Docker, Nginx, AWS, GitLab CI.

You have experience developing asynchronous, failure-tolerant, microservice based architectures.

You can see through complex architectures and communicate technical ideas.

You know how to use modern cryptography: RSA, ECDH, and HMAC all sound familiar to you.

You are interestd in SSI

WE ARE OFFERING

• Very diverse responsibilities and areas of work, opportunity to learn new tech,

• possibility to leverage your own ideas and be creative,

• possibility to increase your own reputation as developer through contributing to open source projects, writing technical papers, presenting at meetups and conferences,

• remote work with flexible working hours as long as you can meet deadlines and deliver targets,

• small, agile, open-minded team with flat hierarchies and short decision ways,

• equity.

If this sounds like you, and you're interested in joining a purpose-driven team and working on advanced tech, we'd love to hear from you!
