# Are you an experienced **Full Stack Web Developer (f/m/d)** looking for your next challenge?

## We're looking for you!

### WHO WE ARE AND WHAT WE DO

Domi Labs is digital identity start-up that was founded 2019 in Berlin. The core of our product is a SaaS platform for identity management and electronic contracting. It is based on the emerging decentralized digital identity technology called Self-Sovereign Identity. We want to set a standard for exchange of documents containing personal data in business processes.

Currently we are working on the core technology and its first business application in the real estate space. We are looking to build an agile, open-mined, vision-driven team of experts in the following months.

### WHAT YOU WILL DO

You will be working closely with the founders to shape the direction of our technology and take our product from proof-of-concept to product launch.  In particular,

- you will be responsible for the implementation of the B2B-part of our property management platform,
- work on both the frontend and the backend,
- actively shape the UX and UI of the product,
- implement features like role based access and real-time notifications,
- be responsible for the deployment of the production software with Docker and AWS,
- onboard and mentor new developers as we extend the engineering team,
- be responsible for managing your tasks and setting your goals by yourself.

### QUALIFICATIONS WE'RE LOOKING FOR

- You are a mid/senior level software developer with at least 4 years of experience in full stack web development.
- You know at least two backend languages from the following list: Typescript/Node.js , Java, Python, Clojure, Elixir and a corresponding major framework.
- You have solid experience in building dynamic SPA's with React.js and the rest of the ecosystem like webpack, sass/less, html, plain old JS, yarn, ...add your favorite

- You are not intimidated by DevOps tasks and you are familiar with Docker, Nginx, AWS, GitLab CI.
- You have experience with MongoDB, DocumentDB or similar noSQL database.
- Understanding of user's perspective
- You are constantly keeping an eye on new tech, you adopt new things fast if needed
- Ability to work independently and stay self-motivated
- Proficiency in English and German

A strong plus: You are interested in functional programming, ideally you know at least one functional language like Clojure, any other LISP family language, Elixir, Haskell, F#,...

A strong plus: You comment your code.

## WHAT WE ARE OFFERING

- Very diverse responsibilities and areas of work, opportunity to learn new tech,
- opportunity to leverage your own ideas and be creative,
- remote work with flexible working hours as long as you can meet deadlines and deliver targets,
- small, agile, open-minded team with flat hierarchies and short decision ways,
- chance to increase your own reputation as developer through contributing to open source projects, writing technical papers, presenting at meetups and conferences,
- equity.

If this sounds like you, and you're interested in joining an exceptional team and working on advanced tech, we'd love to hear from you!
